1. Install Required Packages

```
sudo apt update
sudo apt install nginx mysql-server php-fpm php-mysql unzip curl -y
```

2. Configure MySQL for WordPress

```
sudo mysql -u root
```

Create a Database and User:

```
CREATE DATABASE mydatabase;

CREATE USER 'techuser'@'localhost' IDENTIFIED BY 'techpassword';

GRANT ALL PRIVILEGES ON mydatabase.* TO 'techuser'@'localhost';

FLUSH PRIVILEGES;

EXIT
```

3. Download and Set Up WordPress

Download WordPress:

```
curl -0 https://wordpress.org/latest.tar.gz
wget https://wordpress.org/latest.zip
unzip wget https://wordpress.org/latest.zip
```

Extract:

```
tar -xzvf latest.tar.gz
```

Move WordPress Files:

```
sudo mv wordpress /var/www/html/
```

Set Permissions:

```
sudo chown -R www-data:www-data /var/www/html/wordpress
sudo chmod -R 755 /var/www/html/wordpress
```

4. Configure Nginx for WordPress

```
(You can remove the default site)
sudo vi /etc/nginx/sites-available/wordpress
server {
   listen 80;
    server_name example.com www.example.com;
    root /var/www/html/wordpress;
    index index.php index.html index.htm;
    location / {
        try_files $uri $uri/ /index.php?$args;
    }
    location ~ \.php$ {
        include snippets/fastcgi-php.conf;
        fastcgi_pass unix:/var/run/php/php-fpm.sock;
        fastcgi_param SCRIPT_FILENAME
$document_root$fastcgi_script_name;
        include fastcgi_params;
    }
    location ~ /\.ht {
        deny all;
    }
}
Enable the Configuration:
sudo ln -s /etc/nginx/sites-available/wordpress /etc/nginx/sites-enabled/
sudo nginx -t
sudo systemctl reload nginx
Restart services after changes:
sudo systemctl restart nginx
```

sudo systemctl restart php7.4/8.3-fpm (Whatever is installed)
